

What makes Allimax so effective?

WHAT IS ALLICIN?

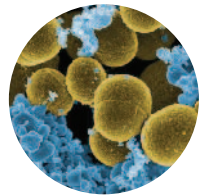

When the sulphur compound alliin combines with an enzyme called allinase, a chemical reaction starts. The first compound that is formed is alliin, which is very unstable and quickly changes into a series of other sulphur containing compounds known as thiosulphinates. Stabilization of the alliin is critical to certifying antimicrobial bioactivity. Alliin is the principle compound responsible for the many healing properties attributed to garlic. This principle compound breaks down to form a family of beneficial sulphur compounds that can aid health, immunity and general well-being. The entire stabilized complex is required to get the measurable benefits expected from a natural antimicrobial.

HOW IS ALLIMAX MADE?

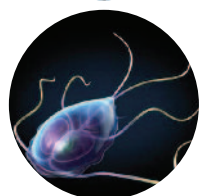

Chemist Peter Josling, engineer Norman Bennett and collaborators have recently come up with a completely new, patented approach to producing a natural antimicrobial containing real, pre-formed alliin. At a high concentration alliin is an oily unstable substance that quickly decomposes. However our patented alliin production process dilutes alliin very quickly to a concentration where it is stabilized and can be dried to produce the Allimax formulations.

Allimax is made in the same way that alliin from fresh garlic is formed. In a unique temperature and pressure-controlled process, water is used to continually flush alliin from a reaction vessel as soon as it's formed. This yields a dilute water solution of alliin, which is further diluted and freeze-dried onto a maltodextrin-matrix to produce stabilized alliin powder. These controlled conditions maintain alliin's potency and bioactivity.

This sophisticated refinement process has for the first time captured garlic's active component – alliin – and delivers it directly to where your body needs it.

Giardia is one of the many microbes susceptible to Allimax. Antiviral, Antifungal, Antibiotic and Antiprotozoal, Allimax is the widest spectrum Natural Antimicrobial available on natural food shelves.

"Allimax is something our family wouldn't be without. If we start to feel a cold or fluish symptoms we take 5 caps right away and the sick feeling is usually gone in an hour or less."

"Over the course of 10 days my allergies quickly became non-existent, and unlike medications it lasted several months. I am very happy with Allimax and will continue to use it as long as I have allergies. I would highly recommended it to anyone."

MRSA

Scientists at the University of East London have shown that aqueous extracts of alliin are able to kill vast swathes of the so called "superbug" MRSA (Methicillin Resistant Staphylococcus Aureus). This nasty bacterium is forever changing its structure and developing resistance to many pharmaceutical antibiotics. This may have a significant effect on people who suffer from skin diseases such as eczema and acne as this bacterium is 6 to 7 times more likely to colonize in these patients.

CACMID

In March 2007, Halifax, Nova Scotia, The Canadian Association of Clinical Microbiologists and Infectious Diseases Conference, accepted an abstract submitted by Dr. Ron Cutler, Microbiologist, that stabilized alliin kills superbug Acinetobacter Baumannii; a deadly bug that causes infections in Canadian soldiers.

Allimax^{TM/MC}

Nature's Antimicrobial 100% Stabilized Allicin

- ✓ Can prevent and treat the common cold
- ✓ Is certified bio-active
- ✓ Can help and prevent fungal, bacterial and viral infections
- ✓ NPN 80022062

"It's not a miracle, it's just effective!"

Allimax^{TM/MC} is BENEFICIAL for the prevention and treatment of:

BACTERIAL INFECTIONS FUNGAL INFECTIONS VIRAL INFECTIONS

Effective against routine ailments like Strep, Rhinovirus, & Influenza, Allimax impresses because of its proven antimicrobial action against formidable invaders including the superbug MRSA, Candida and Protozoa (Giardia Lamblia)

**AVAILABLE IN
30, 90, 180
Capsules**

HOW MUCH ALLIMAX DO I NEED TO TAKE?

Allimax works directly on pathogenic microbes, halting their replication. Dosage is dependent on condition, virulence, susceptibility and stage of infection. Just one capsule of Allimax taken each day with a little cold liquid during your main meal will provide enough allicin for your general health and well being.

COLDS, INFLUENZA & GENERAL INFECTIONS

If you feel a cold coming on or are suffering from a known infection then you can take as many as 10 or more capsules in one dose or repeatedly to relieve the symptoms. Continue to take an increased dose for as long as you feel a benefit and then return to the maintenance dose of 1 capsule per day. People from around the world routinely take 10 times this dose to help with serious infections like MRSA.

SAFETY & TOXICOLOGY

Government approved tests show that as many as 777 capsules per day could be taken in one dose without detrimental effects!

ACNE: Take 2-4 capsules per day for at least 4 weeks.

ANIMAL BITES: Take 2-3 Allimax capsules daily for a period of 6 weeks.

ATHLETE'S FOOT: Take 2-3 capsules per day as well as rub the powder in between the toes.

BLADDER INFECTIONS: Take 3-6 caps per day for 4 weeks.

CANDIDIASIS: Take at least 3-6 capsules per day, for 2-4 weeks.

CANKER SORES: Dissolve capsules into water and gargle, every four hours. Continue for one week.

CELLULITIS: Take 4-6 caps per day for 14 days. Reduce to 1-2 per day.

COLD SORES: During outbreak take 2-4 capsules per day. Take 1 capsule per day for prevention.

COLDS & FLU: For prevention take 1-2 capsules per day. At first sign of infection take 4-6 capsules for a period of one week. Relief should be felt within first 24 hours.

COUGH & RESPIRATORY: Dissolve capsule in water and gargle. Do this every night for 3-5 days. Before bed, take 6 capsules and continue until cough begins to break up. Reduce dose to 4 and then to 2 after a further week.

DIARRHEA: Take one large dose of 6 Allimax capsules. In severe cases, repeat once, six hours later.

HAY FEVER: Take 2 capsules per day to reduce hay fever attacks.

EAR INFECTIONS: Take 4 capsules per day for one week.

ECZEMA: Take high dose of up to 6 capsules per day for one month or until condition improves. Follow this regimen for a month or until condition improves. Continue a reduced dose of 1-2 capsules per day for maintenance.

IMPETIGO: Take 2-4 caps per day until infection subsides. Household members should take 1-2 caps per day to prevent infection being passed onto others.

IRRITABLE BOWEL SYNDROME: Take 2-4 capsules plus a multi-strain probiotic to every meal.

PARASITES: Take 6 capsules half hour before first meal. Reduce to 2 capsules after a month

PARONYCHIA: Take 2-4 capsules until condition resolves itself.

PEPTIC ULCER: Take 6-10 capsules for 2-4 weeks.

PSORIASIS: Take 2-6 capsules per day.

SINUSITIS: Take 1-3 capsules daily for 2 weeks.

SORE THROAT: Dissolve capsule in water and gargle. Take 3 capsules per day as needed.

ORAL THRUSH: Dissolve capsule in water and gargle 2-3 times daily as needed.

TRAVELLER'S TUMMY: Prevention: Take 1-2 capsules per day and probiotic 7 days before travel. Take 1-2 capsules per day while away, and keep taking capsules 7 days after return from travel.

NOTE: Allimax powder can be dissolved in water or added to any base cream or aloe vera gel for topical application.

ONCE CONDITIONS HAVE RESOLVED THEMSELVES, ALWAYS USE ALLIMAX ONCE PER DAY FOR PREVENTION AND MAINTENANCE.
